

Thermal Insulator

Ideal for extreme hot or cold climates, "F" Series coatings provide excellent insulation by creating a Thermal Break, greatly reducing energy consumption and energy bills.

Vipeq F08 W/mK = 0.058.

Fire resistance (UNE-EN 13501:2002)
Bs2d0 y Broof (t1)

Fire Retardant

Cork naturally reflects heat from a fire and won't create ash or propagate flames.

Water Resistant

The F-Series is permeable to water vapour but waterproof to rain water.

"F" Series Coatings

The "F" Series is an eco-friendly, natural, textured coating that provides unparalleled thermal characteristics.

When applied in two coats, with a final film thickness a touch over 3mm (3000 microns) it provides a thermal break with an equivalent R-Value of 1. (w/mk = 0.058) making it the ideal insulating coating in extreme hot or cold climates - Imagine reducing your electricity bills between 18% and 50%! These are the results achieved in 18 other countries to date.

On top of its thermal characteristics "F" Series is also inherently fire retardant. In the same way that the bark on a Cork tree protects its tree from fire and other natural elements you can now enjoy the benefits of nature and protect your property in the harshest of environments.

There is so much more to this great product, we invite you to review the videos and other data displayed on our website or call us to discuss your upcoming coatings project.
