

CEWOOD

NATURAL VARIATION

Cewood is made from natural wood. Wood, being a natural material, can vary in colour and tone. At Decor Systems, we celebrate this. We think the natural variation is what makes it beautiful. When Cewood is installed, this variation may be present as displayed below.

VISUAL EFFECT OF HIGHER DENSITY EDGES OF CEWOOD PANELS

All Cewood panels are produced with increased density on the two long side edges. This ensures the safer fastening of the material with screws. When installed, faint lines can appear between panels due to the increased density of the edges. Mostly, this won't be noticeable, but in brightly lit spaces can appear.
